JOB DETAILS

Full NOC Description

Software developers and programmers design, write, and test code for new systems and software to ensure efficiency. They create the foundations for operative systems and run diagnostic programs to certify effectiveness. They are employed in computer software, computer and video game development firms, information technology consulting firms, and in information technology units throughout the public and private sectors.

Main Duties

This group performs some or all of the following duties:

- Design, write, read, test, and correct code for new software
- Analyze information to recommend and plan the installation of new systems or modifications of an existing system
- Evaluate simple interrelationships between programs such as whether a contemplated change in one part of a program would cause unwanted results in a related part
- Program animation software to predefined specifications for interactive video games, Internet and mobile applications
- Write, modify, integrate and test software code for e-commerce, Internet and mobile applications
- Develop, implement, modify and maintain gameplay features that integrate effectively into existing software
- Write documentation for new and updated software.

Also Known As

- application programmer
- computer game developer
- electronic business (e-business) software developer
- interactive media developer
- multimedia developer
- software developer
- software programmer

REQUIREMENTS

Employment Requirements

- A bachelor's degree in computer science or software engineering or in another discipline with a significant programming component or completion of a college program in computer science or related field is usually required.
- Experience as a computer programmer is usually required.

Provincial Regulation

Not Provincially Regulated

EMPLOYMENT BY GENDER

The following graph shows the percentage of men and women working in this occupation in New Brunswick.

Software developers and programmers
